Batch system support in CREAM

The following batch systems are now fully supported in CREAM in EMI:

- Torque/PBS
- LSF
- (S)GE
- SLURM (accounting sensor is missing)

Support for Condor is in place in the BLAH component (the component that implements the interface with the batch system), but support in information providers and in yaim configuration module is not in place (i.e. a `emi-condor-utils` package does not exist).
