cvmfs-virgo server and client setup

Documentation

CmvFS technical report 2.1-4

Hardware

HOSTNAME	O.S.
cvmfs-virgo.cnaf.infn.it	SL6 64bit

Server installation and setup

Download RPMs

```
# wget --no-check-certificate https://ecsft.cern.ch/dist/cvmfs/cvmfs-release/cvmfs-release-2-4.el6.noarch.rpm  
# rpm -ivh cvmfs-release-2-4.el6.noarch.rpm  
  
# wget https://ecsft.cern.ch/dist/cvmfs/kernel/2.6.32-358.18.1.el6/kernel-firmware-2.6.32-358.18.1.el6.noarch.rpm  
# wget https://ecsft.cern.ch/dist/cvmfs/kernel/2.6.32-358.18.1.el6/kernel-2.6.32-358.18.1.el6.aufel6.noarch.rpm  
# wget https://ecsft.cern.ch/dist/cvmfs/cvmfs-2.1.15/cvmfs-server-2.1.15-1.el6.x86_64.rpm --no-check-certificate  
# wget https://ecsft.cern.ch/dist/cvmfs/cvmfs-2.1.15/cvmfs-2.1.15-1.el6.x86_64.rpm --no-check-certificate  
  
# yum install -y awstats webalizer
```

Server installation

```
# yum localinstall kernel*.rpm  
  
Increase ulimit adding * - nofile 8192  
  
in the file /etc/security/limits.d/90-nproc.conf  
  
# reboot  
  
# ulimit -n  
8192  
# yum localinstall cvmfs*.rpm
```

Setup cvmfs repository

```
# /etc/init.d/httpd restart  
# chkconfig httpd on  
  
# adduser virgo  
  
# cvmfs_server mkfs virgo.infn.it  
Owner of virgo.infn.it [root]: virgo  
Creating configuration files... done  
Creating CernVM-FS master key for virgo.infn.it in /etc/cvmfs/keys/virgo.infn.it.pub... done  
Creating self-signed certificate for virgo.infn.it in /etc/cvmfs/keys/virgo.infn.it.crt... done  
Create CernVM-FS Storage... done  
Create Initial Repository... done  
Mounting CernVM-FS Storage... done  
Initial commit... New CernVM-FS repository for virgo.infn.it
```

Before you can install anything, call `cvmfs_server transaction` to enable write access on your repository. Then install your software in /cvmfs/virgo.infn.it as user virgo.
Once you're happy, publish using `cvmfs_server publish`

For client configuration, have a look at 'cvmfs_server info'

If you go for production, backup your software signing keys in /etc/cvmfs/keys/!

```
# ls /cvmfs/  
virgo.infn.it
```

Software installation

- As root type cvmfs_server transaction
- Install software in /cvmfs/virgo.infn.it as user virgo

```
# su - virgo  
  
-bash-3.2$ ls  
new_repository  
  
-bash-3.2$ cat /cvmfs/virgo.infn.it/helloworld.sh  
#!/bin/sh  
echo "Welcome on cvmfs for virgo VO"  
  
chmod +x /cvmfs/virgo.infn.it/helloworld.sh
```

- As root exec cvmfs_server publish (but outside the directory /cvmfs/virgo.infn.it)

```
# cvmfs_server publish  
Processing changes...  
[add] /cvmfs/virgo.infn.it/helloworld.sh  
Waiting for upload of files before committing...  
Committing file catalogs...  
Exporting repository manifest  
Signing /var/spool/cvmfs/virgo.infn.it/tmp/manifest  
Remounting newly created repository revision
```

cron to update the signature of a repository

```
# cat /etc/cron.weekly/cvmfs-resign.cron  
#!/bin/sh  
date >>/var/log/cvmfs-resign.log  
/usr/bin/cvmfs_server info|grep valid >>/var/log/cvmfs-resign.log  
/usr/bin/cvmfs_server resign >>/var/log/cvmfs-resign.log  
/usr/bin/cvmfs_server info|grep valid >>/var/log/cvmfs-resign.log  
  
# chmod +x /etc/cron.weekly/cvmfs-resign.cron
```

cvmfs repository info

```
# cvmfs_server info  
Repository name: virgo.infn.it  
Created by CernVM-FS 2.1.10  
Stratum1 Replication Allowed: no  
Whitelist is valid for another 29 days  
  
Client configuration:
```

```
Add virgo.infn.it to CVMFS_REPOSITORIES in /etc/cvmfs/default.local  
Create /etc/cvmfs/config.d/virgo.infn.it.conf and set  
  CVMFS_SERVER_URL=http://localhost/cvmfs/virgo.infn.it  
  CVMFS_PUBLIC_KEY=/etc/cvmfs/keys/virgo.infn.it.pub  
Copy /etc/cvmfs/keys/virgo.infn.it.pub to the client
```

Repository structure

TODO

Client setup

WN and UI

cvmfs repository

```
# SL5x/CentOS5x  
wget --no-check-certificate https://ecsft.cern.ch/dist/cvmfs/cvmfs-release/cvmfs-release-2-4.el5.  
rpm -ivh cvmfs-release-2-4.el5.noarch.rpm  
  
# SL6x/CentOS6x  
wget --no-check-certificate https://ecsft.cern.ch/dist/cvmfs/cvmfs-release/cvmfs-release-2-4.el6.  
rpm -ivh cvmfs-release-2-4.el6.noarch.rpm
```

Client installation and setup

VO	public key
virgo	HERE

```
# yum install cvmfs-keys cvmfs cvmfs-init-scripts  
  
# cvmfs_config setup  
Starting CernVM-FS: [ OK ]  
  
# cat /etc/cvmfs/default.local  
CVMFS_REPOSITORIES=virgo.infn.it  
  
# ll /etc/cvmfs/keys/  
total 24  
[...]  
-r--r--r-- 1 root root 451 Sep 25 16:24 virgo.infn.it.pub  
  
# cat /etc/cvmfs/config.d/virgo.infn.it.conf  
CVMFS_SERVER_URL=http://cvmfs-virgo.cnaf.infn.it/cvmfs/virgo.infn.it  
CVMFS_PUBLIC_KEY=/etc/cvmfs/keys/virgo.infn.it.pub  
CVMFS_HTTP_PROXY="http://squid01.cnaf.infn.it:3128|http://squid02.cnaf.infn.it:3128"
```

Download the public key to (/etc/cvmfs/keys/virgo.infn.it.pub) from HERE

```
# /etc/init.d/autofs restart  
# chkconfig autofs on
```

Client test

cvmfs_config chksetup

```
# cvmfs_config chksetup  
OK
```

cvmfs repository info

cvmfs_config showconfig

```
